Cuckoo

Do you know the bird called the cuckoo? They are so named because of their *call. Cuckoos have a little-known characteristic. It is that they do not raise their own *chicks that were *hatched from the eggs that they laid, but they have other kinds of birds raise them. They put their eggs in the nests of other species of birds. At this time, they take one of the eggs from the nest so that the birds living in the nest do not realize a change in the number of eggs. The birds living in the nest do not realize that these cuckoo eggs are not their eggs.

When a cuckoo chick is hatched from an egg, it knocks the other eggs in the nest to the ground so that it can be raised alone. Many species of birds feed a cuckoo's chick because they don't realize it is not their own *offspring. Thus, the cuckoo grows up under the care of other kinds of birds. It is not yet clear why cuckoos have this characteristic. Some researchers believe it may be because cuckoos do not have a high body temperature and cannot warm their eggs by themselves. Because of their weakness, cuckoos depend on other kinds of birds to survive.

- C) sometimes eat other kinds of birds.
- D) are raised by other birds.

- A) Because cuckoos cannot build nests.
- B) Because the cuckoo's body temperature is too low.
- C) Because cuckoo eggs are eaten by other birds.
- D) Because a cuckoo doesn't realize the egg.

No.16 What does a cuckoo do when it places its egg in another bird's nest?

No.17 Who feeds the cuckoo chicks?

No.18 Why do cuckoo chicks knock the other eggs to the ground?

3 ライティングテスト (16点)

I like reading books more than watching movies. I have two reasons for this opinion. First, when reading books I can imagine the characters and events of the story in my own way. Second, I can learn many new words and the correct spelling of words when reading books. For the above reasons, I believe reading books is better than watching movies.
